eHealth Connect® Intelligent Health Record Aggregation

Patients visit many physicians and facilities during the diagnosis and treatment of their illnesses. As a result, their medical records become fragmented. When a referral to a major care facility occurs, it is important that the specialists have a complete record available to ensure the best possible care. eHealth Technologies™ uses its physician network and smart software to pull together a complete integrated medical record, including progress notes, labs, pathology, and images, with salient terms highlighted.

High Staff Efficiency and Job Satisfaction

The burden of external record collection is removed from your staff, allowing them to focus on patient care. Instead of spending hours or days collecting records, your staff can spend **minutes submitting a record collection request** electronically to eHealth Technologies' Customer Operations Center.

This enhanced workflow makes for a happier staff. In fact, an independent customer satisfaction survey showed clinical staff reported **100% job satisfaction** after implementing [eHealth Connect Intelligent Health Record Aggregation](#).

Patient Satisfaction and Retention

54% of patients report measurable benefits from having their records available at the time of their first visit. Neither the patients nor their families are burdened with this responsibility and can focus on their health rather than their records.

Secure Request Tracking

You can **track the status** of any record requests online. Our Customer Support Specialists are also available online and via phone to answer any questions.

Higher Treating Physician Efficiency

eHealth Technologies **delivers a complete medical record** into the EMR and PACS infrastructure the clinician uses every day. We also organize, index and present the aggregated medical record to the treating physician with his or her custom, clinically relevant menu so he or she can easily navigate the record and only access the information needed.

This makes the patient's first appointment meaningful and productive for both the patient and the clinician — by focusing on the future treatment plan instead of gathering past medical history.

Potential Revenue Increase

Facilities have experienced a **72% reduction in cancelled procedures and appointments** by having the relevant patient records available in a timely manner. In addition, patients who are seeking treatment as soon as possible will go to the facility that can accommodate their request. Faster appointment disposition may result in increased revenue.

Critical Record Transfer

Transfer of records and images for emergent traumas and critical care cases is also possible through [eHealth Connect Clinical Referral Coordination](#). Care providers outside of your facility can upload records and images securely providing you **easy and immediate access** to the information you need.

Reduced Time to First Appointment

Our team takes on the work of compiling and delivering complete medical records for incoming patients. Some facilities have experienced **61%—250% faster record collection** allowing them to assess and schedule patients soon after receiving the referral. Neither the ill patient nor the hospital staff bears the record collection burden.

Fast Implementation

Our deployment team works closely with you to have you up and running in less than 30 days by using the [Record Speed Launch Program](#) process. The system is **simple to use**, and setup requires minimal IT support.
